Clicks - Data backup & Backup PC

After finished setup / configuration of Click's software, a backup should be made. If possible it's additionally recommended to setup a second PC as fall-back for problems with the main PC.

Backup

The complete configuration of Clicks is saved in three files:

● Clicks.ini

   - eingerichtete Kopierer

   - global settings

● Clicks.xml

   - all price lists

● Licence.key

   - License file

The securest way is to backup the complete configuration directory of Clicks. It can be opened easy from the start menu:

Start menu ► All programs ► COPYTRON ► Clicks ► Installation tools ► Configuration directory

A new window from the Windows® Explorer will be opened with all required configuration files. Copy this files and directories into a new directory on an USB stick. You can use this method also the save different configurations.

Backup PC

Install the Clicks software on the second PC. Then open the configuration directory of Clicks from the start menu. A new window from the Windows® Explorer will be opened. Now copy all files from the directory on the USB stick to this directory.
